

Dr. Raffaele Ricciardi

TONTARRA

Testimonial:

“ The mini-sizes of the GUBBINI systems allow to perform hysteroscopic and resectoscopic interventions without anesthesia at all. A great advance in modern gynecology! Still, some patients will need local anesthesia due to anatomic circumstances. It is also reassuring in case of anxiety and increased stress level, both for patient and doctor. With the “Hysteroblock” uterine paracervical block needle, I perform with success an easy and reliable injection for local anesthesia during interventions with the GUBBINI Mini-Hystero-Resectoscope. ”
